Developing Processing Techniques for Skylab Data  
Monthly Progress Report, November 1973

The following report serves as the ninth monthly progress report for EREP Investigation 456M which is entitled "Developing Processing Techniques for Skylab Data." The financial report for this contract (NAS9-13280) is being submitted under separate cover.

The purpose of this investigation is to test information extraction techniques for SKYLAB S-192 data and compare with results obtained in applying these techniques to ERTS and aircraft scanner data.

During this report period it was learned that the SKYLAB S-192 data gathered for this contract will not be available for several months. As a result it was decided to suspend plans for aircraft data processing in order to conserve contract funds at this time. Until S-192 screening imagery is available and judged acceptable, no processing of aircraft data will be pursued.

Because of the long delay in the receipt of the S-192 data it is anticipated that a contract time extension will be required in order to properly carry out the investigation.
